Engineered for 32 GHz true analog bandwidth that delivers

Real-time oscilloscope models from 16 GHz to 32 GHz

Need bandwidth?

When you're deploying leading edge high-speed serial bus designs like FibreChannel, SAS 12 G, or 10 Gb Ethernet KR, jitter matters and picoseconds count. When you're doing spectral analysis of wide-bandwidth RF signals or investigating transient phenomena, bandwidth is critical. You need the most accurate real-time oscilloscope you can get. Agilent Infiniium 90000 X-Series scopes are engineered for **32 GHz** true analog bandwidth that delivers:

- The industry's highest real-time scope measurement accuracy
- The industry's only 30 GHz oscilloscope probing system
- The industry's first application-specific measurement software

32 GHz true analog bandwidth

The quest for higher real-time scope bandwidth involves pushing against the physical limitations of state-of-theart integrated circuit technology. We define true analog bandwidth as performance achieved directly through the hardware of the real-time oscilloscope, and we've achieved breakthrough performance of **32 GHz** with the Infiniium 90000 X-Series. Other vendors, limited to 16 GHz hardware, employ various techniques to boost the bandwidth specification of their scopes. However, these methods introduce noise and distortions that negatively impact measurements.

With the Agilent Infiniium 90000 X-Series oscilloscopes, you get the fastest real-time oscilloscope on the planet with the best measurement accuracy available today.

The industry's highest real-time scope measurement accuracy.

When you're designing with faster signals, shrinking eyes and tighter jitter budgets mean that error introduced by your oscilloscope can seriously impact your measurement results. The Agilent Infiniium 90000 X-Series scopes deliver the highest measurement accuracy available by offering the following industry-leading characteristics:

- · Highest true analog bandwidth (32 GHz)
- Lowest oscilloscope noise floor (2.04 mV at 50 mV/div, 32 GHz)
- · Lowest jitter measurement floor (150 fs)

Having the highest analog bandwidth, and lowest noise floor available means better spectral analysis of transients and wide-bandwidth RF signals.

Industry's first 30 GHz oscilloscope probing system.

No matter how good your scope is, if your probes can't operate at sufficient bandwidths your measurements are compromised. The Agilent Infiniium 90000 X-Series scopes offer probing solutions that are up to the tough challenges of high-speed signal capture with the following:

- InfiniiMax III high frequency probes with automatic AC calibration (PrecisionProbe)
- Fully-integrated probe amplifier s-parameter correction
- · The industry's first bandwidth-upgradable probes

Easily isolate signals of interest like this zone qualified view with InfiniiScan software triggering, just one of over 40 application-specific software options

The industry's most comprehensive applicationspecific measurement software.

When time is of the essence, you need tools that can speed true understanding of your signal activity. From serial bus debug and compliance testing to jitter measurements to sophisticated triggering capability, Agilent stays on top of the test standards and your requirements and works to ensure that you get accurate results more quickly. The Agilent Infiniium 90000 X-Series scopes offer the following

- The broadest range of jitter, triggering, analysis and display tools
- Pre-built compliance testing software based on the expertise of our engineers on the standards committees
- Support for emerging technologies including FibreChannel, SAS 12G, or MIPI-NPhy

32 GHz true analog bandwidth of the oscilloscope and 80 GSa/s sample rate provides ultra-low noise

Capture your longest signal with up to 25 ms data using 2 Gpt of acquisition memory at 80 GSa/s.

See your signal more clearly with a 12.1-inch XGA (1024 \times 768) high-resolution color touch screen display

Identify anomalies easily with a 256-level intensity-graded or color-graded persistence display that provides a three dimensional view of your signals

Live indicator shows when the scope is running a long operation.

Remote access through 10/100/1000 BaseT LAN interface with web-enabled connectivity uses ultra-responsive Ultra VNC.

GPIB over LAN provides remote measurements. Optional Infiniium application remote program interface allows application/ compliance software automation. LXI class C compliant.

Removable hard disk drive option is available for added data security.

Optional USB external DVD-RW drive allows you to install your favorite third-party software conveniently and can be used to back up your critical measurement data

Simply press the horizontal delay knob to set the delay value to zero. A zoom button provides quick access to two screen zoom mode.

10 MHz reference clock can be input to or output from the scope to allow precise timebase synchronization with RF instruments or logic analyzers

Dedicated single acquisition button provides better control to capture a unique event

Customizable multipurpose key gives you any five automated measurements with a push of a button. You can also configure this key to execute a script, print/save screen shots, save waveforms or load a favorite setup.

Measure section, including a toggling marker button and a dedicated marker knob, provides quick access to your marker control.

Quick access to fine/vernier control by pressing the horizontal and vertical sensitivity knobs.

Increase your productivity with a familiar Infiniium graphical user interface, including your favorite drag-and-drop measurement icons. Infiniium's analog-like front panel has a full set of controls color-coded to the waveforms and measurements, making your tasks simple.

Three front panel USB 2.0 host ports match your USB keyboard, mouse, and USB memory drive connection for saving setup and data files and screen shots.

An additional four USB 2.0 host ports and a USB 2.0 device port on the back panel. Perfect for extra connectivity including an optical drive. A USB 2.0 device port lets you control the scope and transfer data via a USB 2.0 480-Mbpts connection.

The highest real-time scope measurement accuracy

Whether you're deploying emerging high speed bus technology, identifying spectral content of wide-bandwidth RF signals, or analyzing transient physical phenomena, you need the truest representation of your signals under test. Agilent invested in leading edge technology to bring you the highest real-time oscilloscope measurement accuracy available today. New custom integrated circuits using a proprietary Indium Phosphide (InP) process and breakthrough packaging technology enable industryleading performance, including the:

- · Highest true analog bandwidth
- · Lowest oscilloscope noise floor
- · Lowest oscilloscope jitter measurement floor

Highest true-analog bandwidth- 32 GHz

The engineering of a high-performance real-time oscilloscope front end requires designing pre-amplifiers, triggering capability, and sampling technology. But putting it all together might be the toughest challenge. Using fine line microcircuit processes and relying extensively on years of experience with RF design, Agilent developed the front end multi-chip modules shown here for the Infiniium 90000 X-Series oscilloscopes. Packaging technology provides excellent high-frequency electrical properties along with superior heat dissipation. It enables the highest true analog bandwidth available today in real-time oscilloscopes.

Industry's lowest noise floor.

One of the keys to measurement accuracy at high bandwidths is minimizing the noise generated by the oscilloscope itself. Agilent utilizes a proprietary Indium Phosphide (InP) integrated circuit process in the design of the Infiniium 90000 X-Series oscilloscopes because other processes just can't deliver the necessary combination of highbandwidth and low noise. Not only does that mean you're purchasing the best tool today, but it also means you can count on technology leadership from Agilent in the future.

The highest real-time scope measurement accuracy

Jitter measurement floor of less than 150 fs

How much better is our jitter measurement?

We made measurements on multiple sine waves from an Agilent signal generator. We compared the Agilent Infiniium 90000 X-Series scope to DSP boosted oscilloscopes from our competitor.

Industry's lowest real-time oscilloscope jitter measurement floor

Oscilloscope bandwidth allows signal rise times to be more accurately depicted. The oscilloscope noise floor directly impacts the y-axis voltage placement of each signal data point. The Infiniium 90000 X-Series scopes combine superiority in these characteristics with extremely low sample clock jitter (< 20 femptoseconds). This ensures the lowest possible contribution to jitter measurements from the scope itself so you're using your jitter budget on your design.

With up to 2 Gpts of memory, low frequency jitter components can be resolved in a single measurement.

Short-Term Jitter Comparison

The results show that the 90000 X-Series consistently makes significantly (up to 10x) lower jitter measurements than its competitor.

InfiniiMax III Probes with PrecisionProbe software

The DSO X-Series oscilloscope has the industry's only probe AC calibration software (PrecisionProbe), providing AC calibration of your entire InfiniiMax probing system. Typically probe loading effects increase as the frequencies of your system increase. This causes measurement errors due to probe loading. PrecisionProbe automatically removes the effects of probe loading on your systems, without the need to create transfer functions via TDR or Vector signal analyzer. Unlike other products which use generic models, it provides 100% accuracy to the tip of the probe.

The InfiniiMax III 30 GHz probing system includes accessories to enable probing with a ZIF tip, browsing, or connecting to 2.92 mm inputs.

Fully-integrated probe amplifier s-parameter correction

Each InfiniiMax III probe amplifier comes pre-packaged with its own customized characteristics via s-parameter files. The InfiniiMax III probing system and the 90000 X-Series communicate via an I²C bus. This communication allows the 90000 X-Series to download the customized s-parameter files from the InfiniiMax III probing amplifier to the scope for greater accuracy.

The InfiniiMax III probing system uses the same InP technology that enables high bandwidth and low noise oscilloscope measurements.

Purchase the probing performance you need today with confidence that you have headroom for the future with Agilent's InfiniiMax III bandwidth upgradable probes. Upgrade to higher performance at a fraction of the cost of new probes as your needs evolve.

The industry's most comprehensive application-specific measurement software

To get the most out of your Agilent Infiniium 90000 X-Series oscilloscope, choose from a wide array of application specific software options that speed your measurement tasks including:

• A broad range of jitter, triggering, measurement, analysis and display tools

A broad range of jitter, trigger, measurement, analysis, and display tools

When time is of the essence you need your scope to acquire and present data in the most usable form so you can get to answers quickly.

The Agilent Infiniium 90000 X-Series oscilloscopes offer the industry's widest range of supporting software with an intuitive interface to simplify learning curves. We've highlighted some of our most popular tools here, and the complete list follows on the next pages.

Agilent's InfiniiSim waveform translation toolset provides efficient de-embedding of probe and circuit element loading, enables measurement translation from accessible probe points to other locations in the system, and simulates waveforms with channel models inserted. Combine measurements and models for accurate characterization of design performance, all done with hardware acceleration for fast update rates.

Not just a tool for the digital world

Infiniium built-in FFT allows users to quickly and easily analyze the frequency components of their signals. Both FFT magnitude and phase can be displayed and can be combined with other built-in math functions or MATLAB[®] based measurements. Standard windowing of Hanning, Flattop and Rectangular are supported along with cursor based power measurements. When more powerful frequency domain measurements are required, including modulation analysis, consider the Agilent 89601A Vector Signal Analyzer software.

- Pre-built compliance testing software based on the expertise of our engineers on the standards committees
- Support for emerging high speed serial buses including SAS 12G, FibreChannel, and PCIe[™] gen3.

Quickly characterize jitter and display histograms, measurement trending, and jitter spectrum.

Pre-built compliance testing software with Agilent expertise

Choose from the industry's widest range of complete applications for compliance and margin testing for high speed serial buses, including SATA, SAS, PCI Express, Ethernet, USB, JEDEC and more. Agilent's measurement experts sit on the industry standards committees and help define compliance requirements. They ensure that our tools deliver to the standards. Set up wizards combined with intelligent test filtering give you confidence you're running the right tests. Comprehensive HTML reports with visual documentation and pass/fail results guarantee that critical information is retained on each test. Technicians can run complete and accurate testing on their own, freeing valuable engineering resources.

Support for proprietary and emerging high speed serial buses

Agilent engineers hold key positions within the governing bodies defining test requirements for interoperability on emerging high speed serial buses. We provide tools as quickly as possible on emerging standards.

User Defined Application software allows automated compliance testing on proprietary buses or while emerging test standards solidify.

Rapidly develop automated measurements for compliance testing with Agilent's User Defined Application software. This tool provides the framework you need to quickly program and automate any set of measurements with an interface similar to that provided in our standard compliance test software. Full control of other Agilent instrumentation is possible, along with automated HTML reporting capabilities

The industry's most comprehensive application-specific measurement software: measurement, analysis and decode software packages

Trigger on and decode CAN, LIN and FlexRay serial packets

CAN. LIN and FlexRay triggering and decode (N28803A or Option 063 on new scope purchases)

Trigger on and view both protocol layer information and physical layer signal characteristics for CAN, LIN and FlexRay buses. Numerical decode values are automatically displayed and synchronized below the captured signal or seen in protocol viewer.

Hardware-based triggering for CAN and LIN means triggering reliably, even on the most infrequent events. FlexRay uses software-based protocol triggering.

This application works on all models and can use any combination of scope and logic acquisition channels.

Conduct jitter analysis.

EZJIT analysis software (E2681A or option 002 on new scope purchases)

Quickly characterize and evaluate most commonly needed jitter measurements, including cycle-cycle, N-cycle, period, timeinterval, error, setup and hold time, histograms, measurement trending and jitter spectrum.

This application is supported on all models and is standard on DSA models.

Analyze jitter plus RJ/DJ separation.

Recover embedded clocks with serial data analysis (SDA).

High-speed serial data analysis software (E2688A or Option 003 on new scope purchases)

Quickly validate signal integrity for high-speed serial interfaces with embedded clocks. Recover embedded clocks synchronized with the analog waveform view. Build and validate eye diagrams.

The SDA package also includes software-based bit-level triggering and decode for 8B/10B. This application is supported on all models and comes standard on DSA models.

Trigger and view on-screen serial decode of I²C packets

Identify signal integrity issues with InfiniiScan Zone - Qualify triggering.

I^2C/SPI serial trigger and decode (N5391A or Option 007 on new scope purchases)

Given even futher insights with protocol decode capability. Quickly move between physical and protocol layer information using the time-correlated tracking marker. Display protocol content using waveform symbols and the industry's first multi-tab protocol viewer. The packets tab shows a high level view of the packet over time.

InfiniiScan event identification (N5415B or Option 009 on new scope purchases)

Rapidly trigger on complex events and identify signal integrity issues. This innovative software quickly scans through thousands of acquired waveform cycles and isolates anomalous signal behavior.

Trigger on and decode SAS/SATA serial packets.

SATA/SAS triggering and decode (N8801A or option 018 on new scope purchases)

Trigger on and view both protocol layer information and physical layer signal

characteristics for SATA 1.5 Gb/s, 3.0 Gb/s, and 6.0 Gb/s. Numerical decode values are automatically displayed and synchronizes below the capture signal or seen in protocol viewer.

For more information: www.agilent.com/find/N8801A

The industry's most comprehensive application-specific measurement software: measurement, analysis and decode software packages

Trigger on and decode USB packets.

Signal equalization using user-defined function.

USB serial trigger and protocol viewer (N5464A or Option 016 on new scope purchases)

Trigger on and quickly view USB 2.0 packets, payload, header and detail information. Powerful time-correlated views of waveform and symbol, to the bit level, make it easy to isolate communication faults.

For more information: www.agilent.com/find/90000_USB_protocol_viewer

User-defined function (N5430A or Option 010 on new scope purchases)

If we haven't provided exactly what you need, use the N5430A User Defined Function software to create it yourself. Develop your own math functions or filters using MATLAB. Your custom functionality is seamlessly integrated into the Infiniium 90000 menus and results are displayed on the scope screen. This requires MATLAB (available as Option 062) to be installed directly on the oscilloscope. Agilent is the only T&M manufacturer today that sells and supports MATLAB as its own product.

This application is supported on all models and requires MAT-LAB software (not included with UDF)

For more information: www.agilent.com/find/UDF

The industry's most comprehensive application-specific measurement software: compliance testing and validation software packages

Test DDR memory.

Full suite of DisplayPort source tests.

DDR1/DDR2/DDR3 compliance testing (U7233A/N5413A/ U7231A or Options 031/032/033 on new scope purchases)

Quickly and easily evaluate and characterize your memory designs. Automated testing based on JEDEC specifications saves time. The application also includes additional debug and compliance capabilities.

This application is supported on all models. However, the DDR technology you are using may dictate the minimal bandwidth required for your scope.

For more information: www.agilent.com/find/DDR

DisplayPort compliance test software (U7232A or Option 028 on new scope purchases)

Sets the benchmark for ease-of-use, and offers complete testing without compromise. The software guides the user sequentially through the tasks ensuring minimal setup error, executes the tests specified by the standard and conveys the test information through a convenient software generated report. The three modes of physical layer test allow for automated measurements based on the customizable configuration of compliance and characterization testing. To make the test signal connection, the Agilent W2641A DisplayPort test point access adaptor completes the DisplayPort source solution.

For more information: www.agilent.com/find/U7232A

The industry's most comprehensive application-specific measurement software: compliance testing and validation software packages

HDMI Electrical performance validation and compliance software (N5399A or Option 023 on new scope purchases)

Quickly verify and debug your high definition multi-media interface (HDMI) designs. The N1080A fixture provides access to the compliance points for the electrical measurements required for the transmitter compliance testing.

For more information: www.agilent.com/find/N5399A

Verify and debug your HDMI designs.

Automatically execute D-PHY electrical checklist tests for CSI and DSI architectures.

MIPI D-PHY Compliance test software (U7238A or Option 035 on new scope purchases)

Automatically execute D-PHY electrical checklist tests for CSI and DSI architectures. Displays the results in a flexible report format.

For more information: www.agilent.com/find/d-phy_compliance

PCI Express[®] Electrical performance validation and compliance software (N5393B or Option 022 on new scope purchases)

Provides fast and easy way to verify and debug your PCI Express designs. Allows you to automatically execute PCI Express electrical checklist tests, and displays the results in a flexible report format. Ensures that your Gen2 measurements will have absolute consistency with measurements made using the PCI-SIG's[®] standalone Sigtest software.

For more information: www.agilent.com/find/N5293B

Quickly verify and debug your PCI Express[®] designs

Quickly validate and debug your SAS designs

Serial attached SCSI (SAS) electrical performance validation and compliance software (N5412A or Option 027 on new scope purchases)

Serial attached SCSI (SAS) electrical performance validation and compliance software for Infiniium oscilloscopes provides you with a fast and easy way to validate and debug your SAS 1.5-Gbps (SAS 150) and 3.0-Gbps (SAS 300) silicon, host bus adapter, initiator, high-density disk drive or enclosure backplane. The SAS electrical test software allows you to automatically execute SAS electrical checklist tests at each of the IT, CT, IR and CR interface points, and displays the results in a flexible report format. In addition to the measurement data, the report provides a margin analysis that shows how closely your device passed or failed each test.

Simplify the validation of SATA designs

SATA 6G Compliance Test Software (N5411B or Option 038 on new scope purchases)

Rapidly validate and debug your SATA 1.5Gb/s (Gen 1), 3.0Gb/s (Gen2) and 6.0Gb/s (Gen3) silicon, host bus adapter, port multiplier, high-density disk drive, solid-state disk drive or optical disk drive. Provides automated compliance test support for the i (internal), m(eSATA) and x(SAS attachment) interfaces points, and displays the results in a flexible report format.

Validate and debug your USB 3.0 silicon, host, hub or device

USB 3.0 Compliance Test Software (U7243A or Option 041 on new scope purchases

Provides industry leading automated test support for USB 3.0 products and displays the test results in a comprehensive test report. For best measurement accuracy use the Agilent U7242A USB 3.0 transmitter and receiver test fixtures. Agilent's USB 3.0 test solution is designed from the ground up with the needs of the test engineer in mind.

The industry's most comprehensive application-specific measurement software: compliance testing and validation software packages

Quickly automate oscilloscope measurements.

Automatically execute 10GBASE-T Ethernet physical-layer (PHY) electrical tests

User-definable application (N5467A or Option 040 on new scope purchases)

Rapidly develop your own automated measurements and tests. This application provides the framework you need to quickly program and automate any single or set of measurements the oscilloscope can make. The application also provides full control of other Agilent instruments and HTML reporting capabilities.

10GBASE-T Ethernet electrical conformance application for Infiniium oscilloscopes (U7236A or Option 036 on new scope purchases)

Takes care of the tedious task of instrument control and configures the oscilloscope, spectrum analyzer, or vector network analyzer as needed by each 10GBASE-T test to provide rapid, accurate, and repeatable test execution.

Sampling Modes

Real-Time	Successive single shot acquisitions
Real-Time with Averaging	Selectable from 2 to 65534
Real-Time with Peak Detect	80 GSa/s in half channel mode, 40 GSa/s in full channel mode
Real-Time with Hi Resolution	Real-time boxcar averaging reduces random noise and increases resolution

Performance characteristics

Sampling model (continued)	
Segmented memory	Captures bursting signals at max sample rate without consuming memory during periods of inactivity Number of segments (Up to 524,288 with option 026) Maximum time between triggers is 562,950 seconds Re-arm time: 4.5µs
	Maximum memory depth: Up to 4 Gpts in 1/2 channel mode with option 026
Filters	
Sin(x)/x Interpolation	On/off selectable FIR digital filter. Digital Signal Processing adds points between aquired data points to enhance measurement accuracy and waveform display
Hardware Trigger	
Sensitivity	Internal low Internal high Auxiliary
Edge Trigger Bandwidth	
Minimum Pulse Width Trigger	
Hardware	
Software (InfiniiScan)	
Level Range	
Internal Auxillary	\pm 4 div from center screen or \pm 4 Volts, whichvever is smallest
Auxiliary	\pm 5 V, also limit input signal to \pm 5V
Sweep Modes	
Display jitter (displayed trigger jitter)	
Trigger sources	Channel 1, Channel 2, Channel 3, Channel 4, aux, and line
Trigger Modes	
Edge	Triggers on a specified slope (rising, falling or alternating between rising and falling) and voltage level on any channel or auxiliary trigger
Edge Transition	Trigger on rising or falling edges that cross two voltage levels in > or < the amount of time specified. Edge transition setting from 250 ps.
Edge then Edge (time)	The trigger is qualified by an edge. After a specified time delay between 10 ns to 10 s, a rising or falling edg on any one selected input will generate the trigger
Edge then Edge (Event)	The trigger is qualified by an edge. After a specified delay between 1 to 16,000,000 rising or falling edges, another rising or falling edge on any one selected input will generate the trigger.
Glitch	Triggers on glitches narrower than the other pulses in your waveform by specifying a width less than your narrowest pulse and a polarity. Triggers on glitches as narrow as 125 ps. Glitch range settings: < 250 ps to 10 s.
Line	Triggers on the line voltage powering the oscilloscope
Pulse Width	Trigger on a pulse that is wider or narrower than the other pulses in your waveform by specifying a pulse width and a polarity. Triggers on pulse widths as narrow as 125 ps. Pulse width range settings 250 ps to 10 s. Trigger point can be "end of pulse" or "time out".
Runt	Triggers on a pulse that crosses one threshold but fails to cross a second threshold before crossing the firs again. Can be time qualified with minimum setting of 250 ps.

Hardware Trigger (continued)

Timeout	Trigger when a channel stays high, low, or unchanged for too long. Timeout setting: from 250 ps to 10 s.
Pattern/pulse range	Triggers when a specified logical combination of the channels is entered, exited, present for a specified period of time or is within a specified time range or times out. Each channel can have a value of High (H), Low (L) or Don't care (X).
State	Pattern trigger clocked by the rising, falling or alternating between rising and falling edge of one channel
Window	Triggers on an event associated with a window defined by two-user adjustable thresholds. Event can be window "entered," "exited," "inside (time qualified)," or "outside (time qualified)" voltage range. Trigger point can be "cross window boundary" or "time out." Time qualify range: from 250 ps to 10 s.
Video	Triggers from negative sync composite video, field 1, field 2, or alternating fields for interlaced systems, any field, specific line, or any line for interlaced or non-interlaced systems. Supports NTSC, PAL-M (525/60), PAL, SECAM (625/50), EDTV (480p/60), EDTV (576p/50), HDTV (720p/60), HDTV (720p/50), HDTV (1080i/60), HDTV (1080i/60), HDTV (1080i/60), HDTV (1080p/20), HDTV (1080p/25), HDTV (1080p/24), and user-defined formats.
Trigger Sequences	Three stage trigger sequences including two-stage hardware (Find event (A) and Trigger event (B)) and one-stage InfiniiScan software trigger. Supports all hardware trigger modes except "edge then edge" and "video," and all InfiniiScan software trigger modes. Supports "delay (by time)" and "reset (by time or event)" between two hardware sequences. The minimum latency between "find event (A)" and "trigger event (B)" is 3 ns.
Trigger Qualification AND Qualifier	Single or multiple channels may be logically qualified with any other trigger mode
Trigger Holdoff Range	100nS to 10s
Trigger Actions	Specify an action to occur and the frequency of the action when a trigger condition occurs. Actions include e-mail on trigger and execute "multipurpose" user setting.
Software trigger (requires Infini	iScan event identification software – Option 009)
Trigger Modes	
Zone Qualify	Software triggers on the user defined zones on screen. Zones can be specified as either "must intersect" or "must not intersect." Up to eight zones can be defined across multiple channels.
Generic Serial	Software triggers on NRZ-encoded data up to 8.0 Gbps, up to 80-bit pattern. Support multiple clock data recovery methods including constant frequency, 1st-order PLL, 2nd-order PLL, explicit clock, explicit 1st-order PLL, explicit 2nd-order PLL, Fibre Channel, FlexRay receiver, FlexRay transmitter (requires E2688A except for the constant frequency clock data recovery mode).
Measurement Limit	Software triggers on the results of the measurement values. For example, when the "pulse width" measurement is turned on, InfiniiScan measurement software trigger triggers on a glitch as narrow as 75 ps When the "time interval error (TIE)" is measured, InfiniiScan can trigger on a specific TIE value
Non-monotonic edge	Software triggers on the non-monotonic edge. The non-monotonic edge is specified by setting a hysteresis value.

Performance characteristics

Maximum measurement update rate	> 50,000 measurement/sec (one measurement turned on) > 250,000 measurement/sec/measurement (ten measurements turned on)		
Measurement Modes	Standard, Measure All Edges mode		
Waveform Measurements Voltage	Peak to peak, minimum, maximum, average, RMS, amplitude, base, top, overshoot, preshoot, upper, middle, lower		
Time Mixed	Rise time, fall time, period, frequency, positive width, negative width, duty cycle, burst width, Tmin, Tmax, Tvolt, setup time (requires Option 002 or 004, standard on DSA models), hold time (requires Option 002 or 004, standard on DSA models), channel-to-channel delta time, channel-to-channel phase Area, slew rate, crossing point		
Frequency Domain	FFT frequency, FFT magnitude, FFT delta frequency, FFT delta magnitude		
Level Qualification	Any channels that are not involved in a measurement can be used to level-qualify all timing measurements		
Eye-diagram measurements	Eye height, eye width, eye jitter, crossing percentage, Q factor, and duty-cycle distortion		
Jitter analysis measurements	Requires Option 002 (or E2681A) or 004 (or N5400A). Standard on DSA Series.		
Clock			
Data			
Timing			
Statistics	Displays the current, mean, minimum, maximum, range (max-min), standard deviation, number of measurements value for the displayed automatic measurements		
Histograms			
Source	Waveform or measurement		
Orientation	Vertical (for timing and jitter measurements) or horizontal (noise and amplitude change) modes, regions are defined using waveform markers		
Measurements	Mean, standard deviation, mean ± 1, 2, and 3 sigma, median, mode, peak-to-peak, min, max, total hits, peak (area of most hits), X scale hits, and X offset hits		
Mask Testing	Allows pass/fail testing to user-defined or Agilent-supplied waveform templates. Automask lets you create a mask template from a captured waveform and define a tolerance range in time/voltage or screen divi- sions. Test modes (run until) include test forever, test to specified time or event limit, and stop on failure. Executes "multipurpose" user setting on failure. "Unfold real time eye" feature will allow individual bit errors to be observed by unfolding a real time eye when clock recovery is on. Communications mask test kit option provides a set of ITU-T G.703, ANSI T1.102, and IEEE 802.3 industry-standard masks for compliance testing.		
Waveform Math			
Number of Functions	Four		
Hardware Accelerated Math	Differential and Common Mode		
Operations	Absolute value, add, average, Butterworth9, common mode, differentiate, divide, FFT magnitude, FFT phase, FIR9, high pass filter, integrate, invert, LFE9, low pass filter (4th-order Bessel Thompson filter), magnify, max, min, multiply, RT Eye9, smoothing, SqrtSumOfSquare9, square, square root, subtract, versus, and optional user defined function (Option 010)		
FFT			
Frequency Range	DC to 40 GHz (at 80 GSa/s) or 20 GHz (at 40 GSa/s)		
Frequency Resolution	Sample rate/memory depth = resolution		
Window Modes	Hanning, flattop, rectangular		

Performance characteristics

Measurement modes	
Automatic measurements	Measure menu access to all measurements, five measurements can be displayed simultaneously
Multipurpose	Front-panel button activates five pre-selected or five user-defined automatic measurements
Drag-and-drop measurement toolbar	Measurement toolbar with common measurement icons that can be dragged and dropped onto the displayed waveforms
Snapshot	Takes 29 snap shot measurements (customizable).
Marker modes	Manual markers, track waveform data, track measurements

Display

Diopidy	
Display	12.1-inch color XGA TFT-LCD with touch screen
Intensity grayscale	256-level intensity-graded display
Resolution XGA	1024 pixels horizontally x 768 pixels vertically
Annotation	Up to 12 labels, with up to 100 characters each, can be inserted into the waveform area
Grids	One, two or four waveform grids, each with 8 bit vertical resolution
Waveform styles	Connected dots, dots, infinite persistence, color graded infinite persistence. Includes up to 256 levels of intensity-graded waveforms.
Waveform Update Rate	
Maximum Update Rate	> 400,000 waveforms per second (when in the segment memory mode)

Computer system and peripherals, I/O ports

Computer system and peripherals	
Operating system	Windows® XP Pro
CPU	Intel® Core 2 Duo 3.06 GHz
PC system memory	4GB DDR2
Drives	≥ 250-GB internal hard drive Optional removable hard drive (Option 801) Optional USB external DVD-RW drive (Option 820)
Peripherals	Logitech optical USB mouse, compact USB keyboard and stylus supplied. All Infiniium models support any Windows-compatible input device with a serial, PS/2 or USB interface.
File types	
Waveforms	Compressed internal format (*.wfm (200 Mpts)), comma-separated values (*.csv (2 Gpts)), tab separated values (*.tsv (2 Gpts)), public binary format (.bin (500 Mpts)), Y value files (*.txt (2 Gpts)), hierarchal data file (*.hf5 (2 Gpts))
Images	BMP, PNG, TIFF, GIF or JPEG

Performance characteristics

I/O ports	PCIe x4, GPIB, RS-232 (serial), Parallel, PS/2, USB 2.0 hi-speed (host), USB 2.0 hi-speed (device), Dual-monitor video output, Auxiliary output, Trigger output, Time base reference output
General Characteristics	
Temperature	Operating: 5 °C to + 40 °C; Non-operating: -40°C to +70 °C
Vibration	For operating random the 0.3 g(rms) should be 0.21 g(rms), for non-operating random the 2.41 g(rms) should be 2.0 g(rms) and for swept sins the (0.75g) should be (0.50g).
Power	100 - 240 VAC at 50/60 Hz; maximum input power 800 Watts
Weight	45.1 lbs (20.5 kg)
Dimensions	10.5″x16.75″x18.7″ (27cm x 43cm x 48cm)
Safety	Meets IEC 61010-1 +A2, CSA certified to C22.2 No.1010.1, self-certified to UL 3111

Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment through-out its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements. For information regarding self maintenance of this product, please contact your Agilent office.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.
